Description:

Abstract:

The U.S. Geological Survey (USGS) has entered into a cooperative agreement with the National Park Service (NPS) to deliver satellite imagery and derivative products centered on major fires that impact national parks and other federal lands. This data set was compiled at the request of a federal land management agency and is part of a suite of products generated for a specific fire.

See the National Burn Severity Mapping web site at:

http://edc2.usgs.gov/fsp/severity/fire_main.asp

Purpose:

The purpose of this project is to develop a robust mapping methodology and consistent data products that allow federal land managers and fire ecologists to evaluate and compare burn severity within individual fires and between fires across various ecosystems. These products will help land managers to more effectively plan, implement and monitor fire recovery activities.

Supplemental_Information:

Fire Name: Meshik River

Agency: National Park Service

Land Management Unit: Aniakchak National Monument & Preserve

Date of Fire: 5/22/2006

Type of assessment: Initial

Acres within Fire Perimeter: 1610

Landsat Path and Row: 72/20

Pre-Fire Landsat Date/Scene ID:

Landsat 7; May 29, 2001/LE7072020000114950

Post-Fire Landsat Date/Scene ID:

Landsat 5; June 4, 2006/LT5072020000615510

Output Dataset Projection: Albers Conical Equal Area

Datum Name: NAD83

Spheroid Name: GRS80

1st Parallel: 55 00 00 N

2nd Parallel: 65 00 00 N

Central Meridian: -154 00 00

Lat of Origin: 50 00 00

Northing: 0.0

Easting: 0.0

Image subset Corner Coordinate (center of upper left pixel, projection meters)

ULX: -2460060 LRX: -2355200

ULY: 759960 LRY: 750960

Image subset size:

#Rows: 291

#Columns: 363

Pixel size: 30 meters

Bounding Box:

North Lat: 56 46 48 N

South Lat: 56 42 08 N

East Long: 157 51 13 W

West Long: 158 01 54 W

Latitude and Longitude within Fire Perimeter:

Lat: 56 44 35 N

Long: 157 56 25 W

Fire Perimeter: Digitized from Landsat imagery and dNBR

For further information on NLAPS and Landsat TM data, please refer to the metadata documentation found on the USGS Clearinghouse website at:

Product List:

mesh06a_pretm.tif

Month/Year Pre-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

mesh06a_postm.tif

Month/Year Post-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

mesh06a_dnbr

Differenced Normalized Burn Ratio (DNBR) subset (16 bit ArcInfo Grid)

mesh06a_pi

Fire Perimeter (shape file)

mesh06a_hist.xls

DNBR pixel count within the fire perimeter (excel file)

d722005010606

Month/Year - Month/Year Full Scene DNBR (16 bit Geo-TIFF)

Data_Quality_Information:

Attribute_Accuracy:

Attribute_Accuracy_Report:

Three on-board calibrators (two solar, one internal) provide an absolute accuracy of 5 percent, excluding band 6.

Logical_Consistency_Report:

These Landsat data are collected from a nominal altitude of 705 kilometers in a near-polar, near-circular, sun-synchronous orbit at an inclination of 98.2 degrees, imaging the same 183-km swath of Earth's surface every 16 days. The pixels representing the bands for the image are in the data set only once.

Completeness_Report: Fire perimeter was automated, (seed value 425, distance 325) with manual edits.

Positional_Accuracy:

Horizontal_Positional_Accuracy:

Horizontal_Positional_Accuracy_Report:

Energy reflected from Earth's surface passes through a whisk-broom scanning system and all-reflective optics before being collected by the solid-state detectors at the focal plane.

Lineage:

Process_Step:

Process_Description:

These data products are derived from Landsat Thematic Mapper data. A pre-fire scene and a post-fire scene are analyzed to create a Differenced Normalized Burn Ratio (DNBR) image. The DNBR image portrays the variations of burn severity within the fire.

The Landsat images are terrain corrected and geometrically rectified to an Albers Conical Equal Area map projection using the National Landsat Archive Production System (NLAPS). The images are further processed to convert bands 1-5 and 7 to at-satellite-reflectance. The Normalized Burn Ratio (NBR) is computed for each date of imagery using the following formula:
$$(\text{Band 4} - \text{Band 7}) / (\text{Band 4} + \text{Band 7}) = \text{NBR}$$

The differenced NBR is computed by subtracting the post-fire NBR from the pre-fire NBR:
$$\text{PreNBR} - \text{PostNBR} = \text{DNBR}$$

Higher DNBR values are correlated with more severe burns. The DNBR image is evaluated to determine the threshold value between burned and unburned areas. The perimeter of the fire is delineated using the DNBR image. The DNBR image, the pre-fire and post-fire TM images, and a fire perimeter vector file are provided in digital format in the map projection used by the National Park Service.
